RE: Goals for the "Introduction to Statistics" Class

Dear participants

Welcome to nine hours of ~~slog~~ critical thinking. My goals for this class are to enable you to do the following.

1. Use a computer to investigate the foundations of statistical analysis i.e. be able to use R (even if you intend to analyse data with something else).

2. Confidently and correctly answer all the quiz questions.

3. Extend your own learning with edX courses, our course materials, the "top-5" references and the journal extracts.

4. Understand the following cartoon.

Good luck. I will be running an optional additional seminar, as well as some one-to-one support, for anyone with questions after the course finishes.

Ian Hunt
